

Dear F.C.C

I am definately against allowing broadband power line (BPL). Not only will this service cause extensive and pervasive RF interference over a broad portion of the radio spectrum; but it will also be easily interfered with by licensed radio operators.

There is already an extensive network of broadband available to the public via cable systems, phone systems, and wireless services. Placing BPL over unshielded power lines is un-necessary and not-needed for this technology to become more widely used.

Thank you for the opportunity to put in my two cents,

Sincerely,

David E. Hassell, N5IW
